

# REDWOOD REPORTING

## VALUE OF INFORMATION

Information is arguably your most valuable corporate asset. It's the lifeblood of your organization – it must be delivered at the right time, to the right people, in the right form.

Enterprise applications such as finance, Human Resources, inventory, CRM and these are often islands

of isolated information. Most often, the key information generated by these disparate applications is delivered to end users in a jumble of formats and media – if it's delivered at all. Knowledge workers are forced to spend valuable time simply figuring out where to find documents before they can actually use the information to make critical business decisions.

*We currently have more than seven million reports across our enterprise, all managed by Redwood Reporting\*... We needed a powerful solution to handle this information and make it useful to us – and we have it."*

*– Bill Beaver, IT Director, Enterprise Integration Services, Banner Health  
\*Formally know as Report2Web*

## CONNECT AND COORDINATE

Every application creates and delivers documents and reports, in different ways. The few that offer integrated document delivery capabilities typically manage their own output. As a result, organizations still use a wide variety of delivery mechanisms: Mainframe reports are printed; ERP reports require a proprietary client application; PDF, Excel and Word documents are delivered through traditional file servers, and so on.

If you could join together disparate systems and applications, consolidate information in a central place, and better leverage the business value of your information, you would immediately realize a greater return on your business application investments. It would save your company huge amounts of time and money.

*"...Redwood Reporting was one of the best investments we've ever made."*

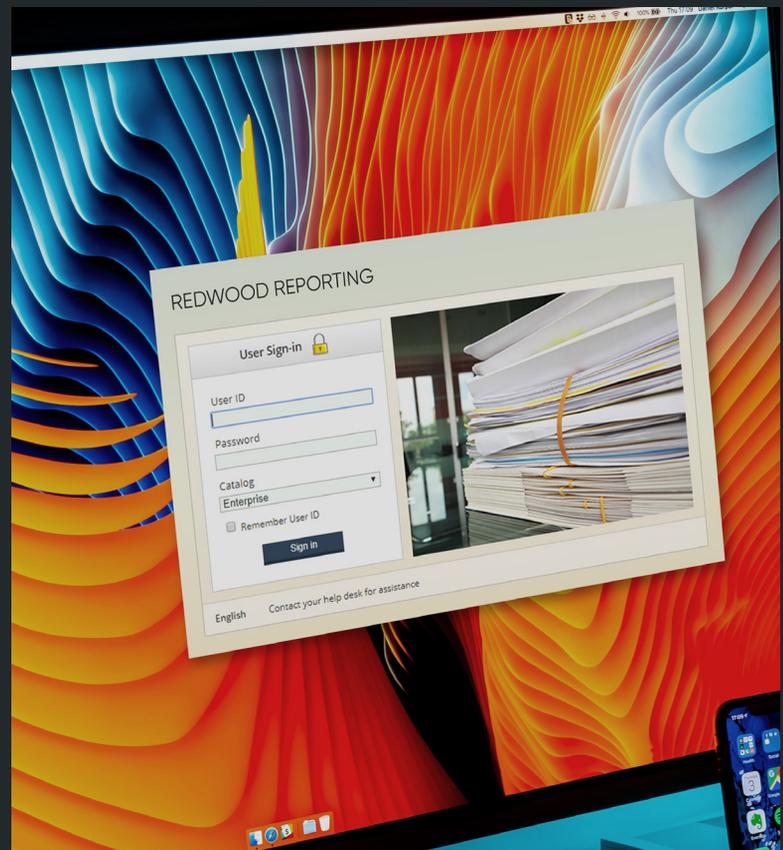

*– Christine Harrington, IS Manager, Staples*

# REDWOOD REPORTING: YOUR INFORMATION – ANYTIME, ANYWHERE

Redwood Reporting gives people focus and clarity by automatically delivering critical reports when, where and in what form they needed them most. Connect employees, partners, and customers to a central and secure enterprise repository for all business-critical information. This eliminates the frustrations and wasted time associated with regularly accessing, collecting and managing reports from disparate systems.

Any electronic document, including UNIX®, Linux, IBM® iSeries, mainframe and client/server generated output, as well as scanned images, can be stored, published, distributed and archived with Redwood Reporting.

## SUPPORT REGULATORY COMPLIANCE

Redwood's automated document archiving, security and auditing enables major corporations around the world to facilitate compliance and mitigate the legal risks associated with e-discovery. Redwood Reporting can also help you comply with extensive regulatory compliance, business policy and transparency requirements for document retention and dispersal.

Because the documents it captures can't be altered, Redwood meets the requirements for a "legal archive," according to Sarbanes-Oxley and many other global standards. Automatically enforce policies on how long to keep information and log all document activity, making complete audit trails available when needed. Customized security ensures that only users with appropriate authorization can access documents.

End-users expect that everything they need should be a few clicks away. That's why Redwood uses an intuitive look and feel that most users are already familiar with to provide consolidated access to business information. It's simple, secure and available where you need it.

With no need to modify existing applications, Redwood Reporting is the low-risk choice for capturing and distributing reports from across the enterprise. Redwood delivers immediate and measurable savings in the management and distribution of business information.

**WHEN YOU MANAGE INFORMATION THIS WAY,  
YOU PAY A PRICE—WHETHER YOU REALIZE IT  
OR NOT—YOU SUFFER FROM:**

- 01 OPERATIONAL MISTAKES**  
Decision makers end up using outdated information.
- 02 SECURITY RISKS**  
Sensitive data is inadvertently exposed to unauthorized users.
- 03 LOST PRODUCTIVITY**  
Users struggle to locate information they need to do their jobs.
- 04 BUSINESS DELAYS**  
Critical documents are delivered late or to the wrong recipient.
- 05 HIGHER COSTS**  
Incurring training and licensing costs for multiple "view only" systems.

“With Redwood Reporting we saw an opportunity to save money, provide a better service to our user community, and meet governmental regulations and HIPAA requirements.”

– Charles Ware, Director of Computer and Communications Services, Wake Forest Baptist Health

## BENEFITS OF REPORTING

- 01 Improved productivity and decision support
- 02 Secure, easy-to-use, constant access to information across your enterprise
- 03 Automated regulatory compliance
- 04 Faster access to critical content with significant cost savings

## EXTEND THE VALUE OF ENTERPRISE TECHNOLOGIES

Many organizations need to deliver content to users outside their enterprise environment. Vendors, suppliers, physician networks and even your customers can have ready access to critical content housed within Redwood Reporting. Using indexing schemes and security policies based on your business rules in conjunction with APIs to query and display content, outside organizations can easily and safely integrate Redwood through existing portals.

## REDWOOD REPORTING

- Enables you to analyze, split and convert report content before distribution to adhere to your business and security rules
- Automatically bundles sections from disparate reports into personalized, unified documents for distribution
- Allows report content to be accessed from within your internal systems by providing APIs for integration
- Provides a single, consolidated portal for people to easily and intuitively access reports generated from virtually any application
- Enables streamlined approval processes.
- Applies automated, comprehensive audit trails.
- Automatically alerts users of new document availability.

“Redwood Reporting's ability to convert certain reports directly into Excel spreadsheets is such a time saving feature, it eliminates any possibility of errors with re-keying data.”

– Mike Castro, VP/Controller, Delta Dental Plan of California
