

TIJL VUYK

▲ CEO / Founder

Tijn Vuyk, CEO of Redwood Software founded the company in 1993 with a couple of friends with the ambition to build a great company.

Now more than 20 years later, looking back at what the organization has achieved, he's amazed to see how much there is still to do.

That aside, Tijn has still managed to grow and mould Redwood into a company that's agile, profitable and a world leader in process robotics software and automation.

Always innovating, his vision for the future is to help companies achieve 'The Robotic Enterprise™' so they can improve efficiencies and direct resources toward front office customer facing activities.
