

REPORT2WEB® SAFE PASSAGE

A PROVEN ALTERNATIVE TO BMC CONTROL-D

It's time for a change. We have the answer. If you'd like to move away from BMC Control-D, discover the speed and ease of Report2Web®. For a fast, effective and comprehensive software and services solution you need our Safe Passage Program.

IMPROVED TOTAL COST OF OWNERSHIP

At Redwood Software, we know what it takes to migrate from one enterprise solution to another – quickly, easily and cost effectively. With our Report2Web Safe Passage Program, you reduce expenses immediately. This unique, risk-free program costs

less than you currently pay in maintenance fees, while providing you with even better report distribution and archiving capabilities. It also helps you to manage capital expenditures against operating costs at the same time – a real game-changer for many organizations.

A RAPID AND SAFE PASSAGE

Unlike other report management solutions that are just a small part of large-scale, complex set of tools, Report2Web is our complete focus. We specialize in automating the delivery of your business critical information, safely,

flexibly and according to your business demands. Our proven migration path is a comprehensive software and services solution that includes:

- ▲ A mature, scalable, enterprise report management solution that fulfills all of your requirements.
- ▲ A flexible licensing model that provides exactly what you need at a lower cost of ownership.
- ▲ Multiple options for a successful, tailored conversion process that suits your environment and requirements.
- ▲ A proven conversion methodology supported by toolsets to migrate Control-D metadata and content to Report2Web—with no surprises.
- ▲ Dedicated, experienced consultants who work with you for the duration of your project to ensure a successful transition and optimal configuration of your reporting environment.

STREAMLINES DISTRIBUTION

With Report2Web it's easy to define routing and distribution rules based upon report attributes you specify—including actual report content. This way, you can accurately index information within the repository any way you want. Rules are easy to define within a standard UI and with our dynamic, content-based processing. Report2Web can typically reduce and simplify thousands of lines of logic from your Control-D

environment to just a handful of manageable rules. In addition to processing standard text or PDF-based output and print files, Report2Web handles electronic documents that originate from most business applications, including Microsoft Office, SAP®, Oracle, hospital information systems (HIS) applications and more. Report2Web also catalogs, publishes, and accesses scanned images just like traditional report file-formats.

MAINTAINS DOCUMENT SECURITY

You can tightly secure sensitive business information within the Report2Web repository. Built to integrate with your enterprise security infrastructure, Report2Web is fully compatible with Lightweight Directory Access Protocol (LDAP) and

Active Directory security standards. It easily integrates with standard or custom single sign-on (SSO) technologies. As an additional security measure, Report2Web offers comprehensive audit logging facilities that assist in protecting organizations against fraudulent activities.

FEATURES YOU EXPECT WITH FLEXIBILITY YOU NEED

Report2Web offers extensive features to assist end users when working with reports. Whether you are using a limited set or many viewing options in Control-D today, your users will find even more flexible and intuitive options within Report2Web. You can easily add notes at the document or line-item level to make it easy for report users to communicate. Public or personal Smart Folders turn repetitive searches into a simple task.

Custom lists of favorites aggregate frequently used documents into a single view – making the most recent or all historic versions of a document just a single click away. Filtering enables you to access report data through different logical views such as by department or invoice number. Template-driven document approval processes offer a convenient, rules-based method of reviewing and publishing content to the user community.

AUTOMATE DATA CONVERSION

Manually re-keying or filtering existing report data into an Excel spreadsheet is an effort of the past. Of course users can perform an ad hoc export of text documents to Excel. But automating the extraction of relevant data

in reports that originate in a number of formats and prepopulating an existing Excel template – including embedded logic and macros delivers real value to your users.

We help companies achieve the 'The Robotized Enterprise™', robotizing up to 100% of end-to-end processes across R2R, O2C, P2P, Human Capital, Supply Chain and others to improve process efficiencies and quality, while diverting resources from the back office and redirecting them to value added customer activities. Today more than 3,000 customers worldwide already work with Redwood Software to eliminate the costs, risks and wasted time of manually repetitive business process tasks.
